

Kindly rewrite the claims as follows:

43. (Amended) A composition comprising:
- (a) at least one particle prepared according to the method of claim 49, and
 - (b) a pharmaceutically acceptable carrier.
44. (Amended) A vaccine composition comprising:
- (a) at least one particle prepared according to the method of claim 57, and
 - (b) a pharmaceutically acceptable carrier.
45. (Amended) A vaccine composition comprising:
- (a) at least one particle prepared according to the method of claim 59, and
 - (b) a pharmaceutically acceptable carrier.
46. (Amended) A composition comprising:
- (a) at least one particle prepared according to the method of claim 61, and
 - (b) a pharmaceutically acceptable carrier.
49. (Amended) A method for preparing one or more particles of calcium phosphate having diameters between about 300 nm to about 4000 nm,

comprising reacting a soluble calcium salt with a soluble phosphate salt,
wherein the reacting comprises:

- (a) mixing an aqueous solution of calcium chloride with an aqueous solution of sodium citrate to form a mixture,
- (b) adding an aqueous solution of sodium phosphate to the mixture to form a solution,
- (c) stirring the solution until particles of the desired size and comprising calcium phosphate are obtained.

62. (Amended) A method for adjuvanting a vaccine comprising administering an effective amount of at least one particle prepared according to the method of claim 49 in conjunction with administration of a killed, attenuated or live vaccine, or a decoy virus to a patient in need thereof.

65. (Amended) A method for providing a controlled release of antigenic material, comprising administering an effective amount of at least one particle prepared according to the method of claim 57 to a patient in need thereof.

67. (Amended) A method for vaccinating a patient, comprising administering an effective amount of a composition comprising:

- (a) at least one particle prepared according to the method of claim 59, and

(b) a pharmaceutically acceptable carrier to a patient in need thereof.

71. (Amended) A method for delivering a therapeutic composition comprising administering an effective amount of a composition comprising at least one particle prepared according to the method of claim 61 to a patient in need thereof.

75. The method of claim 71, wherein the particles comprise a coating of polyethylene glycol and human insulin and are administered to a diabetic patient in need thereof.

78. (Amended) The method of claim 49, further comprising:

(d) sonicating the particles until particles of the desired size are obtained.
